

Easy MQTT automation with trivum

MQTT automation with trivum

- 1. Install an MQTT broker, for example on the Raspi 1
- 2. Send MQTT messages from trivum to the broker..... 1
- 3. Control trivum by MQTT messages 4
 - 3.1. trivum MQTT topics 4
 - 3.2. trivum multi command codes 4

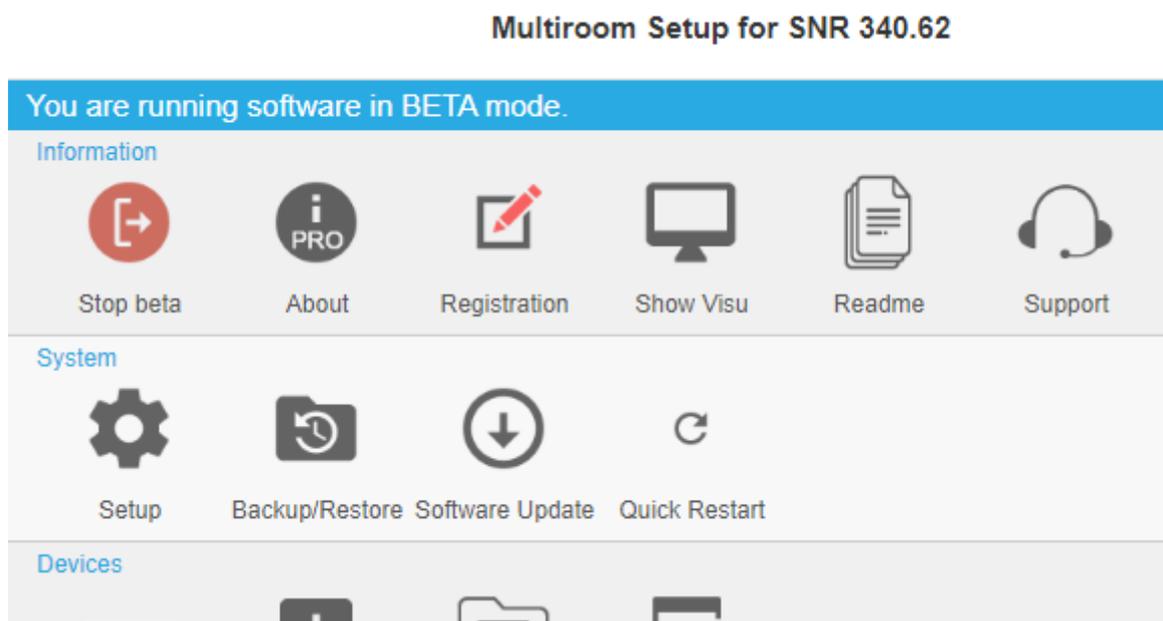

trivum technologies GmbH <info@trivum.com> v1.0, 2025-02-27 :title-logo-image: image::.../images/trivum-logo.svg[pdfwidth=150,align=right]

1. Install an MQTT broker, for example on the Raspi

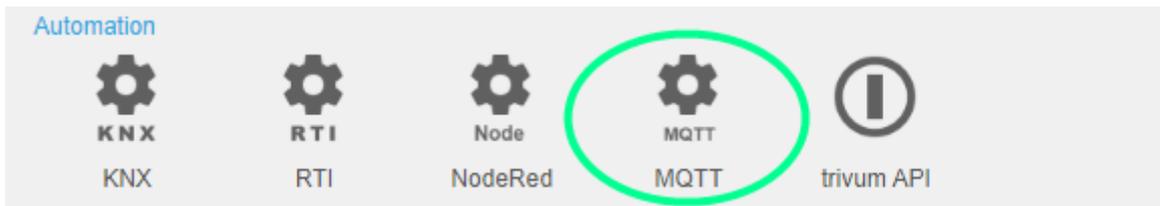

```
sudo apt-get install -y mosquitto mosquitto-clients
```

2. Send MQTT messages from trivum to the broker

- go into the trivum web configuration by typing <trivumip>/beta into your web browser, which also enables Beta features.

- enable MQTT under: **Automation / MQTT**

← **setupMQTT** ↻ 🌐 📺

MQTT SETUP

Use MQTT

Broker IP address
change requires restart **192.168.1.87**

Device topic prefix **trivum**

Enter the IP of your broker (Raspi). Keep the topic prefix. (trivum)

- create a Macro under: **Configuration / Macros** with a step: **send MQTT message**

Configuration

Zones Zone groups Macros DSP Presets

← **editMacroStep** 🔍 ↻ 🌐 📺

DEFINE MACROSTEP OF MACRO 'SEND-MQTT'

Type of macrostep **send MQTT message** >

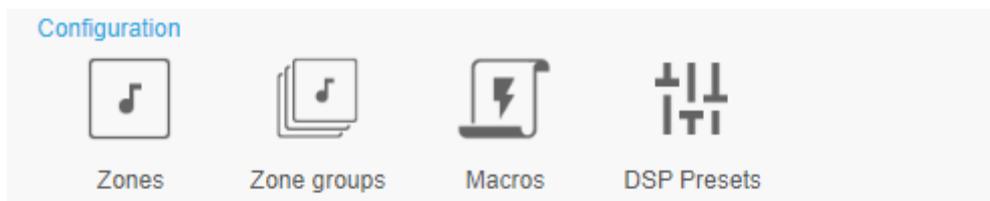

PARAMETERS FOR 'SEND MQTT MESSAGE'

Topic **light/living/1/status/set**

Value **1**

Retain

- create a zone action under: **Configuration / zones / first zone / define actions**
With action: run a macro, then select the above macro.

Define the zone related actions

These actions available TouchPads and Visus and system triggered actions

Select action

Possible actions * for forZone

No action

Activate a source

Send command to a RTI control processor

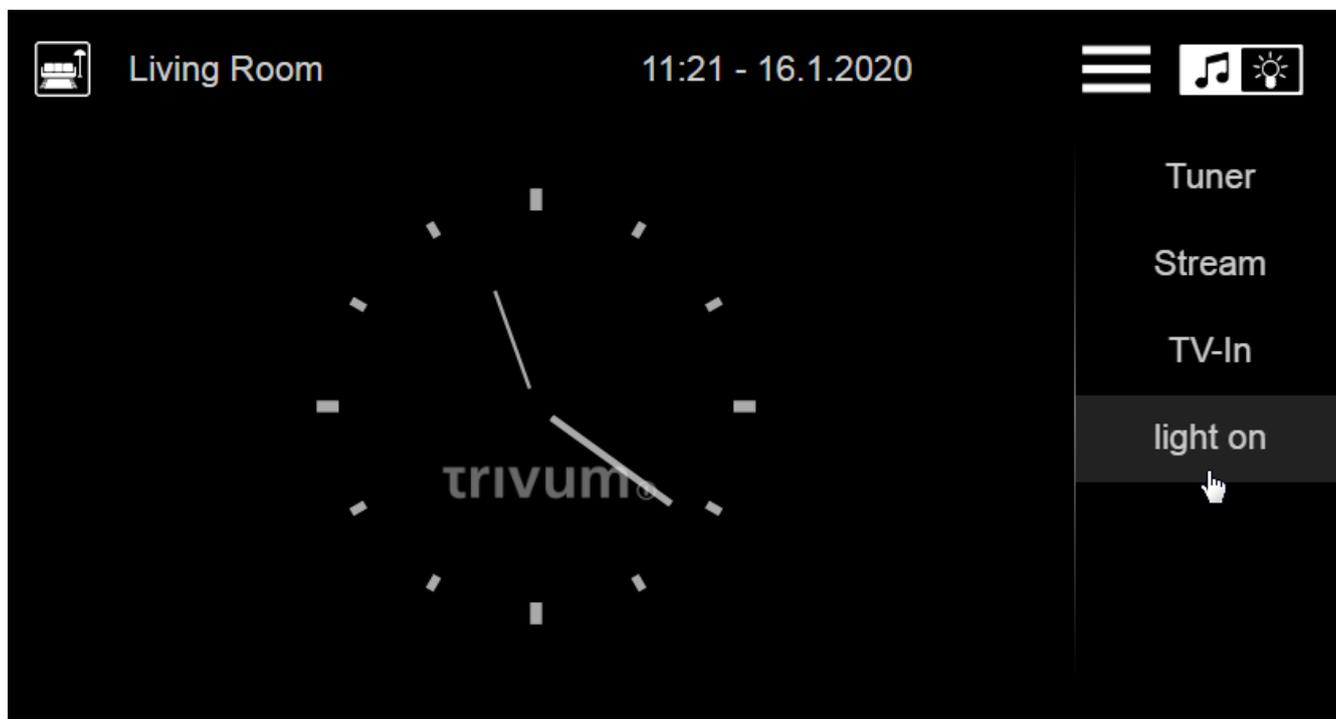

Run a macro (sequence of commands)

- open a web visualization:

In your web browser, open a new tab. Type the IP of trivum. Now you have a web visualization.

On first use it will control the first zone. At the right, the macro action appears.

- click or touch on the macro action. It will send the MQTT message.

Test receive directly on the Raspi like:

```
mosquitto_sub -h localhost -v -t "light/#"
```

which will show:

```
light/living/1/status/set 1
```

3. Control trivum by MQTT messages

In the trivum web configuration, a device topic prefix can be configured, which is **trivum** by default.

3.1. trivum MQTT topics

The trivum device listens to or sends these topics:

topic	function	values
<code>trivum/zone/1/status/set</code> <code>trivum/zone/1/status</code>	set or get the status of a zone	0 = off 1 = on (audible) 2 = muted (on but not audible)
<code>trivum/zone/1</code> <code>/source/set/favorite</code>	play a favourite by number	1 = first favorite
<code>trivum/zone/1</code> <code>/source/set/linein</code>	play a line input by number	1 = first line input
<code>trivum/zone/1/volume/set</code> <code>trivum/zone/1/volume</code>	set zone volume, subscribe to volume	0 to 100
<code>trivum/zone/1/run/command</code>	run a numeric multi command	see multi command codes below

3.2. trivum multi command codes

These are the same as documented in the [trivum HTTP API](#)

For example, when sending `1` to topic `trivum/zone/1/run/command`, the first zone is switched off.

```
ZONECMD_POWER_OFF          001
ZONECMD_MUTE                002   toggle mute
ZONECMD_POWER_TOGGLE       006
ZONECMD_POWER_ON           007
ZONECMD_MUTE_ON            680
ZONECMD_MUTE_OFF           681
ZONECMD_VOLUME_INC         003
```
